Recent developments

India is the second footwear producer in the world, after China. There are several important footwear production centres around the country, the areas of Delhi-Agra and Chennai-Ambur being the most important. Mumbai, in the west of the country, and Kolkota, in the east, are also relevant. India's exports are dominated by leather footwear directed at the major European and American markets, which enables the country to achieve a higher average price than is common for many other Asian producers. Imports to India come mainly from China and other Asian countries.
